

Contact Centre Modernisation for a Regulated Medicare Insurance Enrolment Company

Amazon Connect stabilisation, modernisation, and outbound orchestration in a PHI-regulated environment

4 wk ASSESSMENT → 12-MONTH POD	600 AGENTS ON PLATFORM	3 SOWS EARNED	6 MEASURABLE OUTCOMES	AWS FUNDED ENGAGEMENT
--------------------------------------	---------------------------	------------------	--------------------------	--------------------------

THE CHALLENGE

A large Medicare Advantage enrollment BPO ran a competitive partner selection after a previous vendor left an underperforming Amazon Connect implementation. Armakuni won on an assessment-first approach — providing the first honest picture of the platform before writing any code.

Scale: 600 agents. Multi-tenant BPO serving multiple Medicare Advantage health plan clients. Ranked among Illinois' top 5 billers for SMBs.

A four-week assessment grew into a 12-month Connect Development POD, which expanded to include a dedicated Outbound Phase engagement.

WHAT WE BUILT

ENGAGEMENT	SCOPE
Platform Assessment SOW	Fixed scope. Current-state report, risk plan, architecture diagram, configuration workbook, execution plan.
Connect Development POD	12-month retainer, 100 hrs/month. CI/CD pipelines, PR workflows, PHI-compliant deployment model.
Outbound Phase POD	3-month engagement, 200 hrs/month. Stateful orchestration layer with deterministic lifecycle management.

WHAT'S NEXT

Full CCP migration from NeuraFlash Desktopp, advanced outbound dial-rate optimisation, agent onboarding/offboarding automation with HR system integration, and continued infrastructure modernisation under ongoing pod engagement.

OUTCOMES

- 1

Assessment-first approach won a competitive partner selection
Armakuni gave leadership a clear, honest picture of what was broken and a sequenced plan to fix it — before any code was written or budget committed.
- 2

First honest baseline unlocked the right investment and structure
Before the assessment, the BPO had no reliable picture of its own platform. The four-week engagement delivered five artefacts that validated pod sizing on evidence.
- 3

600 agents operating with improved stability and release governance
Frequent bugs, uncontrolled releases, and missing platform features are being addressed systematically. CI/CD, PR workflows, and a PHI-compliant deployment model are in place for the first time.
- 4

Supervisors now act on problems before customers feel them
Real-time dashboards, Contact Lens in-call analytics, and structured CloudWatch monitoring. Medicare disclaimer compliance monitoring is now automated.
- 5

Outbound now runs on a stateful orchestration layer
Manual recycling, fragile campaign progression, and disposition-based reporting replaced. Policy enforcement, automated outcomes, and lifecycle-based metrics.
- 6

Engagement expanded across three SOWs as each phase delivered
Started with a four-week, \$5,000 assessment. That earned a 12-month POD. The POD earned the Outbound Phase. Land-and-expand as a direct result of the assessment-first model.

ABOUT ARMAKUNI

AWS Premier Tier Partner delivering contact centre modernisation, generative AI, and platform engineering for regulated industries. We start with an assessment — not a proposal.
