

Contact Center Modernization for a Regulated Medicare Insurance Enrollment Company

Amazon Connect stabilization, modernization, and outbound orchestration in a PHI-regulated environment

4 wk	600	3	6	IL
ASSESSMENT GREW INTO 12-MONTH ENGAGEMENT	AGENTS ON PLATFORM	ENGAGEMENT PHASES DELIVERED	MEASURABLE OUTCOMES SHIPPED	TOP 5 SMB BILLER IN ILLINOIS

THE CHALLENGE

A large Medicare Advantage enrollment BPO ran a competitive partner selection after a previous vendor left an underperforming Amazon Connect implementation. Armakuni won on an assessment-first approach — providing the first honest picture of the platform before writing any code.

Scale: 600 agents. Multi-tenant BPO serving multiple Medicare Advantage health plan clients. Ranked among Illinois' top 5 billers for SMBs.

A four-week assessment grew into a 12-month Connect Development engagement, which expanded to include a dedicated Outbound Phase.

THE SOLUTION

PHASE	SCOPE
Platform Assessment Fixed scope, 4 weeks	Current-state report, risk plan, architecture diagram, configuration workbook, execution plan.
Connect Development 12 months · 100 hrs/mo	CI/CD pipelines, PR workflows, PHI-compliant deployment model, real-time dashboards, Contact Lens analytics.
Outbound Phase 3 months · 200 hrs/mo	Stateful orchestration layer with deterministic lifecycle management, policy enforcement, and lifecycle-based metrics.

WHAT'S NEXT

Full CCP migration from NeuraFlash Desktop, advanced outbound dial-rate optimization, agent onboarding/offboarding automation with HR system integration, and continued infrastructure modernization under ongoing engagement.

OUTCOMES

- 1

Won a competitive partner selection against multiple vendors
Leadership received a clear, honest picture of what was broken and a sequenced plan to fix it — before any code was written or budget committed.
- 2

First honest baseline unlocked the right investment and structure
The BPO had no reliable picture of its own platform. The four-week engagement delivered five artifacts that validated engagement sizing on evidence.
- 3

600 agents operating with improved stability and release governance
Frequent bugs, uncontrolled releases, and missing platform features addressed systematically. CI/CD, PR workflows, and a PHI-compliant deployment model in place for the first time.
- 4

Supervisors now act on problems before customers feel them
Real-time dashboards, Contact Lens in-call analytics, and structured CloudWatch monitoring. Medicare disclaimer compliance monitoring is now automated.
- 5

Outbound now runs on a stateful orchestration layer
Manual recycling, fragile campaign progression, and disposition-based reporting replaced with policy enforcement, automated outcomes, and lifecycle-based metrics.
- 6

Each phase earned the next
A \$5,000 four-week assessment earned a 12-month engagement. That earned the Outbound Phase. The land-and-expand trajectory is the direct result of delivering before expanding scope.

ABOUT ARMAKUNI

Armakuni delivers contact center modernization, generative AI, and platform engineering for regulated industries. Our assessment model gives leadership an honest picture of what needs to change — and a sequenced plan to change it.
